Amendment to the Specification

Due to the cancellation of claims in a previous amendment, Michael L. Dunn

is no long an actual inventor. Consequently, applicant requests correction of

inventorship and, specifically, that Michael L. Dunn be deleted as an inventor leaving

Melvin L. Barnes, Jr. as the sole inventor. The fee is attached herewith.

Amendment to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the

application.

Listing of Claims:

21.   (Currently Amended) A <u>handheld</u> wireless communication device,

comprising:

a processor;

a user input device <u>communicatively</u> coupled to said processor;

an audible output device operatively coupled to said processor;

a wireless ~~transmission~~ transmitter operatively coupled to said processor;

a wireless ~~transmission~~ receiver operatively coupled to said processor;

an audible input device <u>communicatively</u> coupled to said processor and

configured to receive voice messages and voice commands; and

a memory coupled to said processor;

said process being programmed to store voice messages and voice

commands received at said audible input device in said memory;

a computer readable medium encoded with executable instructions to cause said processor being programmed to retrieve a voice message and to reproduce said voice message at said audible output device in response to receiving a user input indicating a user request to reproduce said voice message;

said computer readable medium encoded with executable instructions to cause said processor being programmed to retrieve a first voice command and to generate a request signal, said request signal including data based, at least In part, on information relating corresponding to an article of commerce included in said first voice command; and

said computer readable medium encoded with executable instructions to cause said processor being programmed to cause said transmitter to wirelessly transmit said request signal to a remote computer for purchase of said the article of commerce; and

wherein the remote computer is configured to process the sale of the article of commerce.

22.   (Currently Amended) The wireless communication device of claim 21, wherein said computer readable medium is encoded with executable instructions to cause said processor is programmed to retrieve information for purchasing said article of commerce from said memory and programmed to include said information for purchasing said article of commerce in said request signal to transmit said information for purchasing to the remote computer.

23.   (Currently Amended) A handheld wireless communication device, comprising:

a processor;

a user input device <u>communicatively</u> coupled to said processor;

a wireless ~~transmission~~ transmitter operatively coupled to said processor;

a wireless ~~transmission~~ receiver operatively coupled to said processor;

an audible input device <u>communicatively</u> coupled to said processor and configured to receive a voice input, said voice input including information relating to an article of commerce;

a memory coupled to said processor;

<u>a computer readable medium encoded with executable instructions to cause</u> said processor ~~being programmed~~ to generate a request signal including data relating to ~~said~~ <u>the</u> article of commerce in response to a user input; ~~and~~

<u>said computer readable medium encoded with executable instructions to cause</u> said processor ~~being programming~~ to determine a destination for transmitting said request signal and to cause said transmitter to <u>wirelessly</u> transmit said request signal to ~~said~~ <u>the</u> destination<u>; and</u>

<u>wherein the destination comprises a remote computer configured to process the sale of the article of commerce</u>.

24.   (Currently Amended) The wireless communication device of claim 23, wherein said voice input includes destination information and wherein said processor determines ~~said~~ <u>the</u> destination based on said destination information.

25.   (Currently Amended) The wireless communication device of claim 24, wherein said memory includes information for making a purchase stored therein and <u>said computer readable medium is encoded with executable instructions to cause</u>

said processor is programmed to retrieve said information for making a purchase

from said memory and to include wirelessly transmit said information for making a

purchase in said request signal to the destination.

26.   (Previously presented) The wireless communication device of claim

23, wherein said data relating an article of commerce included in said request signal

is based on said information relating to an article of commerce included in said voice

input.

27.   (Currently Amended) The wireless communication device of claim 26,

wherein:

said memory includes information for making a purchase stored therein; and

said computer readable medium is encoded with executable instructions to

cause said processor is programmed to retrieve said information for making a

purchase from said memory and to include transmit said information for making a

purchase in said request signal to the destination.

28.   (Currently Amended) The wireless communication device of claim 27,

wherein:

said memory includes said destination information stored therein; and wherein

said processor retrieves said destination information from memory to

determine said the destination.

29.   (Currently Amended) The wireless communication device of claim 28,

wherein said the destination is an internet address.

Application No.: 09/606,350
Office Action Dated: September 9, 2003

30.   (Currently Amended) The wireless communication device of claim 26, wherein said voice input includes destination information and wherein said processor determines ~~said~~ the destination based on said destination information.

31.   (Currently Amended) A method of using a handheld wireless ~~transmission~~ communication device, said device ~~including~~ comprising an audible output device, an audible input device, and a memory~~,~~ the method comprising ~~the steps of~~:

receiving a first speech input comprising a voice message at ~~said~~ the audible input device;

storing data representative of said first speech input in the memory;

receiving a first input from the user;

audibly reproducing said voice message at ~~said~~ the audible output device in response to receiving said first input from the user;

storing information for making a purchase in memory;

receiving a second input from the user; ~~and~~

~~providing a wireless communication link in response to receiving said second input from the user;~~

in response to said second user input, retrieving said information for making a purchase from memory and wirelessly transmitting said information for making a purchase to a remote computer configured to process a sale;

receiving a third input from the user;

in response to said third user input, establishing a voice communication link with a remote device through a mobile telephone network; and

receiving voice data from the user and wirelessly transmitting data

representing said voice data through said voice communication link.

32.   (Currently Amended) The method of claim 31, wherein ~~said wireless~~

~~communication link is a wireless voice communication link~~ the device further

comprises an image input device and the method further comprises receiving an

image input at the image input device.

33.   (Currently Amended) The method of claim 31, wherein said second

input comprises ~~further comprising the step of receiving a second speech input~~

~~comprising~~ a voice command received at ~~said~~ the audible input device.

34.   (Currently Amended) The method of claim ~~33~~ 31, wherein:

said ~~voice command includes~~ second user input comprises information of ~~a~~

~~destination for transmitting data~~ an address of the remote computer and ~~said~~ the

memory includes information for making a purchase for a plurality of accounts stored

therein~~;~~, the method further comprising ~~the steps of~~:

~~retrieving said information for making a purchase from said memory; and~~

~~transmitting said information for making a purchase to said destination~~

selecting one of said plurality of accounts and wherein said information for

making for a purchased retrieved from the memory corresponds to said selected

account.

35.   (Currently Amended) The method claim 34, wherein said ~~voice~~

~~command includes~~ second user input comprises information relating to an article of

commerce and further ~~including the step of~~ comprising transmitting data, based on

said information relating to an article of commerce, to ~~said destination~~ the remote computer.

36. (Currently Amended) The method of claim 33, wherein~~:~~

said voice command includes information relating to an article of commerce ~~and said memory includes information for making a purchase stored therein; the method further comprising the steps of~~

~~retrieving said information for making a purchase from memory; and~~

~~transmitting said information for making a purchase and data based on said information relating to an article of commerce to a remote computer~~.

37. (Currently Amended) The method of claim 36, wherein said memory includes an address of ~~said~~ the remote computer stored therein and further comprising ~~the step of~~ retrieving said address from ~~said~~ the memory.

38. (Previously Presented) The method of claim 37, wherein said address is an Internet address.

39. (Currently Amended) The method of claim 36, wherein said voice command includes a request relating to ~~said~~ the article of commerce and further ~~including the step of~~ comprising receiving a response from ~~said~~ the remote computer.

40. (Currently Amended) The method of claim 39, wherein said request is selected from the group of a request to make a reservation~~,~~ and a request to purchase ~~a product, and a request for information~~ the article of commerce.

41. (Currently Amended) A method of using a handheld wireless ~~transmission~~ communication device, said device ~~including~~ comprising an audible

input device, <u>an image input device;</u> and a memory;, the method comprising ~~the~~

~~steps of~~:

> <u>receiving an image input at the image input device;</u>
>
> <u>storing data representative of said image input in the memory;</u>
>
> receiving a first speech input at the audible input device;
>
> storing data representative of said first speech input in the memory;
>
> retrieving information from memory based, at least in part, on said first speech

input;

> generating a request signal including, at least in part, said information

retrieved from memory;

> determining a destination for transmitting said request signal; and
>
> <u>wirelessly</u> transmitting said request signal <u>through a mobile telephone network</u>

to ~~a said~~ <u>the</u> destination.

> 42.   (Previously presented) The method of claim 41, wherein:
>
> said first speech input includes information relating to an article of commerce;

and

> said request signal includes data based on said information relating to said

article of commerce.

> 43.   (Previously presented) The method of claim 42, wherein said

information retrieved from memory and included in said request signal includes

information for making a purchase.

> 44.   (Currently Amended) The method of claim 43, wherein the memory

includes ~~said~~ <u>information of the</u> destination stored therein and wherein said step of

determining a destination includes retrieving said <u>information of the </u>destination from memory.

45. (Previously presented) The method of claim 42, wherein said first speech input further includes destination information.

46. (Currently Amended) The method of claim 42, wherein said first speech input includes a request relating to ~~said~~ the article of commerce and further ~~including the step of~~ <u>comprising </u>receiving a response to said request signal.

47. (Previously presented) The method of 46, wherein said request is selected from the group of a request to make a reservation, a request to purchase a product, and a request for information.

48. (Previously presented) The method of claim 41, wherein said speech input includes destination information.

49. (Previously presented) The method of claim 48, wherein said information retrieved from memory and included in said request signal includes information for making a purchase.

50. (Currently Amended) The method of claim 48, wherein ~~said~~ <u>the</u> destination is an Internet address.

51. (Previously presented) The method of claim 49, wherein said request signal includes data representing a variable value pair and said information for making a purchase is a value of said variable value pair.

52. (Currently Amended) A method of using a <u>handheld </u>communication device, said communication device ~~including~~ <u>comprising </u>a memory, the method comprising ~~the steps of~~:

receiving a first speech input, said speech input including information relating corresponding to an article of commerce;

converting said speech input to text data;

determining a destination for transmitting a request relating to said the article of commerce;

retrieving information for making a purchase from the memory;

generating a first signal including data based, at least in part, on said information relating to said the article of commerce;

wirelessly transmitting said first signal to said the destination; and

wirelessly transmitting said information for making a purchase to said the destination; and

wherein the destination comprises a computer configured to process a sale of the article of commerce.

53.   (Currently Amended) The method of claim 52, wherein the memory includes information relating to said the destination stored therein and said step of determining a destination comprises retrieving said information relating to the destination from memory.

54.   (Currently Amended) The method of claim 52, wherein said step of determining a destination includes comprises scanning an image.

55.   (Currently Amended) The method of claim 52, wherein said first speech input further includes information representative of said the destination and said step of determining a destination includes comprises processing said first speech input to establish said the destination.

56.　(Currently Amended)　A method of using a handheld wireless

transmission communication device, said device including comprising an user input

device for providing an input from a user, an image input device, and a memory, the

method comprising the steps of:

receiving first data representative of a first input of image data at the image

input device;

receiving second data representative of an input from the user at the user

input device;

wirelessly transmitting including data representative of at least a portion said

first data and data based on said second data in a first signal to a remote destination

through a mobile telephone network; and

wirelessly transmitting said first signal to a data based on said second data to

the remote destination through the mobile telephone network.

57.　(Currently Amended)　The method of claim 56, wherein said image

data includes data representative of said the remote destination.

58.　(Currently Amended)　The method of claim 57, wherein said image

data is text data and further including the step of comprising converting said first data

representing said first input of image data to text.

59.　(Currently Amended)　The method of claim 57, wherein said the remote

destination is an Internet address.

60.　(Currently Amended)　The method of claim 57, wherein said image

data further includes comprises data relating to an article of commerce.

61.   (Previously Presented) The method of claim 60, wherein said input from the user includes a request selected from the group of a request to make a reservation, a request to purchase a product, and a request for information.

62.   (Currently Amended) The method of claim 56, wherein the memory includes information for making a purchase stored therein and said image data includes information relating to an article of commerce;, and further including the steps of comprising:

retrieving said information for making a purchase from memory; and

including wirelessly transmitting at least a portion of said information for making a purchase and data based on said information relating to an article of commerce in said first signal to the remote destination through the mobile telephone network.

63.   (Previously presented) The method of claim 62, wherein said information for making a purchase includes information relating to a credit card.

64.   (Currently Amended) The method of claim 62, wherein the memory includes user information stored therein; and further including the steps of comprising:

retrieving said user information from memory; and

including wirelessly transmitting at least a portion of said user information in said first signal to the remote destination through the mobile telephone network.

65.   (Currently Amended) The method of claim 62, wherein said image data further includes data representative of said the remote destination.

66.   (Currently Amended) The method of claim 56, wherein said image data includes information relating to an article of commerce ~~and said portion of said first data included in said first signal is data representative of said information relating to an article of commerce~~.

67.   (Currently Amended) The method of claim 66, wherein the memory includes information for making a purchase stored therein~~;~~, and further ~~including the steps of~~ comprising:

retrieving said information for making a purchase from memory; and

~~including~~ transmitting at least a portion of said information for making a purchase ~~in said first signal~~ to the remote destination through the mobile telephone network.

68.   (Currently Amended) The method of claim 66, wherein the memory includes data representative of ~~said~~ the remote destination stored therein; and further ~~including the step of~~ comprising retrieving said data representative of ~~said~~ the remote destination from memory.

69.   (Currently Amended) The method of claim 68, wherein the memory includes information for making a purchase stored therein; and further ~~including the steps of~~ comprising:

retrieving said information for making a purchase from memory; and

~~including~~ wirelessly transmitting at least a portion of said information for making a purchase ~~in said first signal~~ to the remote destination through the mobile telephone network.

70.   (Currently Amended) The method of claim 56, wherein said input from the user ~~includes~~ comprises a speech input.

71.   (Currently Amended) The method of claim 70, wherein said ~~image data includes data representative of said remote destination~~ speech input comprises data relating to the image data.

72.   (Currently Amended) The method of claim 70, wherein said image data ~~includes~~ comprises data relating to an article of commerce and said input from the user ~~includes~~ comprises a request relating to ~~said~~ the article of commerce.

73.   (Currently Amended) The method of claim 72, wherein the memory includes information for making a purchase stored therein and said image data further includes data representative of ~~said~~ the remote destination; and further ~~including the steps of~~ comprising:

retrieving said information for making a purchase from memory; and

~~including~~ wirelessly transmitting at least a portion of said information for making a purchase ~~in said first signal~~ to the remote destination through the mobile telephone network.

74.   (Currently Amended) A method of using a handheld wireless ~~transmission~~ communication device, said device ~~including~~ comprising a memory~~;~~, the method comprising ~~the steps of~~:

scanning an image, ~~said~~ the image including information of a destination for transmitting a signal;

storing data representing at least a portion of ~~said~~ the image in memory;

determining a destination based on said stored data;

Page 15 of 25

receiving a user input;

generating a request signal based, at least in part, on said user input; and

wirelessly transmitting said request signal through a mobile telephone network

to ~~said~~ the destination.

75.   (Currently Amended) The method of claim 74, wherein ~~said~~ the image

is text and further ~~including the step of~~ comprising converting ~~said~~ data representing

at least a portion of ~~said~~ the image ~~data~~ to text.

76.   (Currently Amended) The method of claim 75, wherein ~~said destination~~

~~is an internet address~~

the destination is a computer configured to process the sale of an article of

commerce.

77.   (Previously presented) The method of claim 74, wherein said user

input includes a request relating to an article of commerce.

78.   (Currently Amended) The method of claim 74, wherein the memory

includes information for making a purchase stored therein; and further ~~including the~~

~~steps of~~ comprising:

retrieving said information for making a purchase from memory; and

~~including~~ wirelessly transmitting said information for making a purchase ~~in~~

~~said request signal~~ through the mobile telephone network to the destination.

79.   (Previously presented) The method of claim 78, wherein said

information for making a purchase includes information relating to a credit card.

80.   (Previously presented) The method of claim 78, wherein said image

further includes data relating to an article of commerce.

81.   (Currently Amended) A method of using a <u>handheld</u> wireless

~~transmission~~ <u>communication</u> device, said device ~~including~~ <u>comprising</u> memory

storing a destination therein, the method comprising ~~the steps of~~:

scanning an image, said image including information ~~relating~~ <u>corresponding</u> to

an article of commerce;

storing data representing at least a portion of said image in memory;

receiving a user input;

retrieving the destination;

generating a request signal including data based on said information relating

to ~~said~~ <u>the</u> article of commerce in response to said user input; and

<u>wirelessly</u> transmitting said request signal <u>through a mobile telephone network</u>

to the destination.

82.   (Currently Amended) The method of claim 81, wherein said user input

~~is~~ <u>comprises</u> a speech input.

83.   (Currently Amended) The method of claim 81, wherein the destination

~~is an internet address~~ <u>comprises a computer configured to process the sale of the</u>

<u>article of commerce</u>

84.   (Currently Amended) The method of claim 81, wherein the memory

includes information for making a purchase stored therein; and further ~~including the~~

~~steps of~~ <u>comprising:</u>

retrieving said information for making a purchase from memory; and

including wirelessly transmitting at least a portion of said information for

making a purchase in said request signal through a mobile telephone network to the

destination.

85.   (New) The method of claim 81, further comprising:

establishing a voice communication link with a remote device through a

mobile telephone network;

receiving voice data from the user; and

wirelessly transmitting data representing said voice data through said voice

communication link.

86.   (New) The method of claim 41, further comprising:

establishing a voice communication link with a remote device through a

mobile telephone network;

receiving voice data from the user; and

wirelessly transmitting data representing said voice data through said voice

communication link.

87.   (New) The method of claim 41, further comprising:

establishing a voice communication link with a remote device through a

mobile telephone network;

receiving voice data from the user; and

wirelessly transmitting data representing said voice data through said voice

communication link.

88.   (New) The method of claim 52, further comprising:

establishing a voice communication link with a remote device through a mobile telephone network;

receiving voice data from the user; and

wirelessly transmitting data representing said voice data through said voice communication link.

89.   (New) The method of claim 56, further comprising:

establishing a voice communication link with a remote device through a mobile telephone network;

receiving voice data from the user; and

wirelessly transmitting data representing said voice data through said voice communication link.

90.   (New) The method of claim 74, further comprising:

establishing a voice communication link with a remote device through a mobile telephone network;

receiving voice data from the user; and

wirelessly transmitting data representing said voice data through said voice communication link.
